GREASE SHUT OFF VENT VALVE ASSEMBLY

Grease Vent Valve is an automatic, grease fill shut-off valve designed for lubricating systems, enabling automatic shut-off when a tank is full (typically 3-4 PSI) to prevent overfilling. It is installed on top of tanks with a 2" BSP socket and works alongside Air Vent breathers and safety valve. It is used in 40kg Tanks for mobile workshop grease and mobile equipment.

SHUT-OFF VALVE ASSEMBLY PART # PG-0307-132268-00

Working Pressure: 3–4 psi
Reset Pressure: 10 psi
Maximum Operating Pressure: 1000 psi
Inlet Thread: 3/4"-16 UNF
Outlet Thread: 2" NPTF

AIR VENT VALVE PART # PG-0819-76219-00

Allows the grease tank to vent air during filling and operation, preventing contamination from entering the system. Mounting: It is typically mounted using a 1/2" BSP socket in the top of the tank.

SAFETY VALVE PART # PG-0802-176215-00

Factory Set Pressure: 25 PSI. The valve is designed to activate and release excess pressure if the grease pressure in the tank exceeds approximately 25 PSI (pounds per square inch), preventing damage to the tank or other system components.

GREASE SHUT OFF VENT VALVE ASSEMBLY

Automatic Operation: Allows grease flow into the tank, closing automatically when full to prevent spills.

Installation: Best located on top of the tank, in a 2" BSP socket.

Maintenance: The breather tube must be pointed downward to prevent moisture entry.

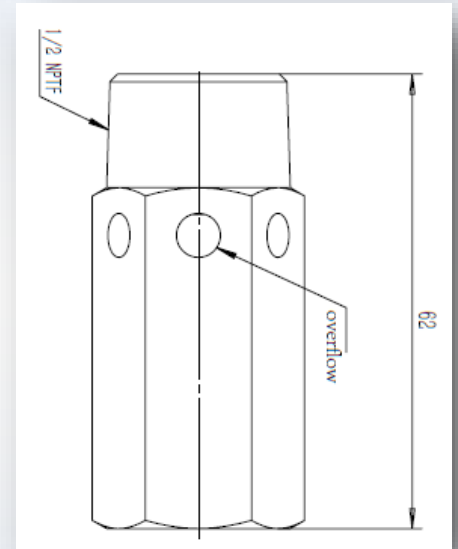

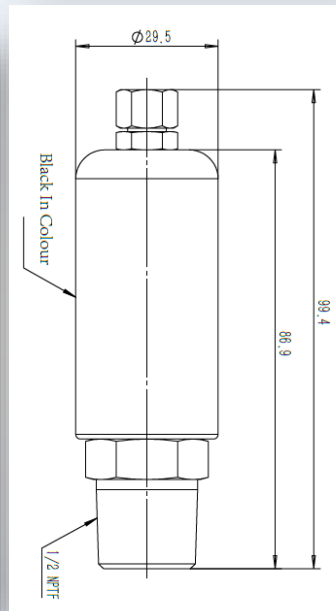

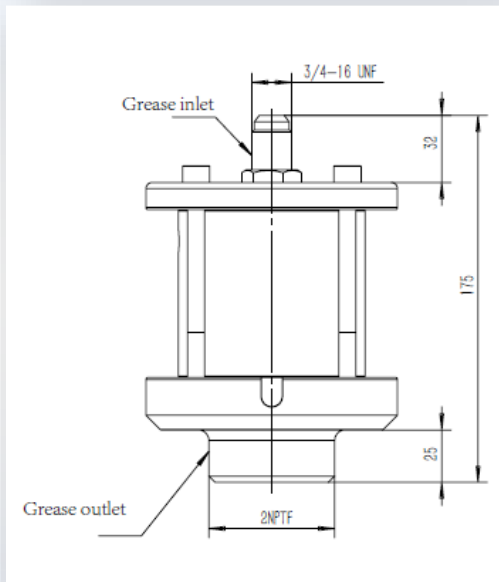

System Pressure: Compatible with tanks that can withstand a maximum of 25 PSI grease pressure.
